

## AQUALINE

### GAC-AG+

#### R/O POLISHING/REMINERALIZATION CARTRIDGE

- SIZE:** 9 3/4 in.: Fits all standard 10 in. housings. (Also available in 2.5" X 20" and Big Blue 10" and 20")
- POST FILTER:** 20 micron spun-bonded polypropylene.
- MEDIA:** Proprietary blend of premium fine mesh coconut GAC and silver impregnated GAC. Silver content = 0.05%
- PRE-FILTER:** 100 micron reticulated poly foam.
- FLOW RATE:** 0.50 - 0.75 gpm
- CAPACITY:** 5000 gallons\*
- pH RANGE:** 5 - 9

\*capacity is for chlorine removal based on 2.2 ppm feed to 10% break

### Technical Information

The Aqualine GAC-Ag+ is a blend of premium, dedusted granular activated carbon with high level silver impregnated GAC to provide a bacteriostatic media. Silver has long been known to prevent bacteria growth. The 0.05% level is frequently used blend for considerations of effectiveness and economy.

The Aqualine GAC-Ag+ cartridge is constructed totally from FDA grade materials and media. The silver GAC used is EPA registered. However, EPA requires that each new 'package' also be registered before it can be used in the USA. Although we would not expect any difficulties in registration, we do not have EPA registration at this time. The Aqualine GAC-Ag+ is therefore offered only for export markets or use outside the USA.
