

SAND

We inventory a wide range of sand, for a variety of applications. Each serves as an excellent filter or support media for a mixed media filter system.

Filter sand consists of hard, durable, and dense grains of predominantly siliceous material that will resist degradation during handling and use. Precision sizing and uniform grading to close limits meet the rigid specifications of professional engineers throughout the world. The sand is low in soluble impurities and it will maintain the quality of the treated water, especially in softeners.

The sand we sell meets AWWA B100-96 specifications and is ANSI/NSF standard 61 certified.

PHYSICAL AND CHEMICAL PROPERTIES

Source.....Silica
 Density.....100 Lbs/Ft³
 Hardness (Moh's Scale).....6-7
 Specific Gravity.....2.6-2.75 gm/cc
 Uniformity Coefficient.....1.6 or less

Size:
 SAND-30......45-.55mm
 SAND-20......8-1.2mm
 SAND-6.....1/8x1/16 in.

ORDER INFORMATION

Part #	Description	Lbs./Bag	Lbs./Cu. Ft.	Bags/Pallet
SAND-30	#30 Sand (.45-.55mm)	100	100	35
SAND-20	#20 Sand (.8-.12mm)	100	100	35
SAND-6-50	#6 Sand	50	100	56
